

SEO — Customer Input Needed

Updated: 2026-04-29

Related master plan: [docs/SEO.md](#)

This file is the short action checklist for inputs Jinee needs to provide before the strongest SEO and Google Ads improvements can be implemented. Technical actions that do not need business input are tracked in [docs/SEO.md](#).

P0 — Needed before Google Ads

1. Confirm the first services to sell

The site should not target every creative service equally at first. Please choose the top 1–3 services to prioritize.

Options:

- Event photographer in Singapore
- Event videographer in Singapore
- Combined photographer + videographer coverage
- Corporate video producer in Singapore
- Documentary producer / field producer / local fixer in Singapore
- Social media content creator / reels videographer in Singapore
- Travel / lifestyle photographer
- Portrait / private event photographer

Why it matters: service priority determines the first landing pages, homepage copy, navigation, Google Ads ad groups, and portfolio proof selection.

2. Confirm the primary conversion goal

Choose the main action the website and ads should optimize for:

- Contact form submission
- Calendly booking
- Email click
- WhatsApp click
- Phone call
- Instagram DM

Why it matters: conversion tracking and landing page CTAs should focus on the action most likely to become paid work.

3. Confirm public phone or WhatsApp

Please confirm whether a phone number or WhatsApp link can be shown publicly.

Why it matters: local service searches and paid ads convert better when visitors can contact quickly, especially on mobile.

P1 — Needed for local SEO and trust

4. Service area and location focus

Please confirm the intended service area:

- Singapore only
- Singapore primary, Taiwan secondary
- Singapore + Taiwan + regional/international travel

Why it matters: affects **ProfessionalService** schema, page copy, Google Business Profile, and keyword targeting.

5. Deliverables and turnaround times

For each priority service, provide typical deliverables and turnaround expectations.

Examples:

- Edited photo count per hour or per event
- Highlight video duration
- Short-form reels count
- Raw footage availability
- Editing rounds included
- Delivery format
- Typical delivery timeline

Why it matters: buyers compare reliability and clarity, not just portfolio quality.

6. Pricing guidance

Please decide whether the site can show:

- Starting prices, e.g. **from SGD ...**
- Package ranges
- **Contact for quote** only
- Private pricing, but with rough project-size guidance

Why it matters: pricing guidance improves lead quality and Google Ads landing page usefulness.

7. Testimonials and reviews

Please provide any approved testimonials or reviews, ideally with:

- Client name or company
- Project type
- Permission to display publicly
- Link to Google review if available

Why it matters: reviews and testimonials are essential trust signals in crowded Singapore searches.

8. Client logo permissions

Please confirm which client/publication logos can be shown on the website.

Potential proof examples from the portfolio include CNA, 8World, Mediacorp, SCDF, NTU Museum, and other visible project clients, subject to permission.

Why it matters: recognizable logos help service landing pages convert.

9. Google Business Profile status

Please confirm:

- Does Jinee already have a Google Business Profile?
- Which Google account owns it?
- Is the profile verified?
- Are reviews already present?
- Should the profile show a physical address or only a service area?

Why it matters: Google local results are heavily influenced by profile completeness, reviews, relevance, distance, and prominence.

P1 — Needed for structured data and metadata

10. Social profile URLs

Please confirm exact public profile URLs.

Platform	Current/likely URL	Confirm or correct
Instagram	https://www.instagram.com/jineechen/	Needed
LinkedIn	https://www.linkedin.com/in/jinee-chen/	Needed
YouTube/Vimeo	Not configured	Optional
X/Twitter	Not configured	Optional
TikTok	Not configured	Optional

Why it matters: profile URLs support entity recognition through **sameAs** structured data and social previews.

11. Real or approximate video upload dates - DONE

Most video entries currently use placeholder-style dates. Please provide real or approximate publication dates in **YYYY-MM-DD** format for important video projects first.

Start with:

- **stuck-low-pay**

- singer-jasmin-sokko
- re-old-times
- healthy-dining
- social-media-addiction
- blind-kitchen-chefs
- uniqlo
- living-with-chronic-pain
- mark-your-calendar
- red-dot-detectives
- i-eat-therefore

Why it matters: improves VideoObject structured data and video-search eligibility.

12. Default Open Graph image

Please choose or approve a 1200×630 image for generic social previews.

Options:

- A strong portrait of Jinee with text overlay
- A hero portfolio image with branding
- A simple branded graphic using existing site typography

Why it matters: improves previews on WhatsApp, LinkedIn, Facebook, X, Telegram, and other sharing surfaces.

P2 — Needed for content depth

13. Project description rewrites

Many current descriptions are short, duplicate, or placeholders. Please provide context for the top projects first.

For each project, useful notes are:

- Client or publication
- Location
- Jinee's role
- Service delivered
- Production context
- What made the project valuable or distinctive
- Whether it should target event, documentary, social, corporate, or photography search intent

Why it matters: stronger descriptions improve meta snippets, long-tail rankings, and buyer confidence.

14. Case-study notes for strongest projects

Please choose 3–5 flagship projects and provide short notes for each.

Recommended case-study fields:

- Client / project type
- Goal
- Jinee's role
- Deliverables
- Location
- Outcome or where the work was used
- Similar services available for new clients

Why it matters: case studies turn the portfolio into commercial proof and support service landing pages.

15. Social media examples to keep on-site

Please choose which Instagram/social media examples should become internal website case studies instead of only linking out to Instagram.

Why it matters: internal pages build SEO value; direct Instagram links send context and visitors away from the website.

16. Female photographer/videographer positioning

Please confirm whether the site should intentionally target **female photographer Singapore** or **female videographer Singapore**.

Why it matters: this can be a useful niche signal, but it should be intentional and authentic rather than forced.

P3 — Legal and operations details

17. Imprint / business details

Please confirm:

- Public business name
- Whether Florian should remain listed on the imprint
- Whether a physical address is required or should stay private
- Whether a phone number should be listed
- Whether there is a registered business/entity name

Why it matters: business details affect legal pages, local trust, and structured data.

18. Google Search Console access

To complete setup after deployment, please provide either:

- DNS access for domain verification, or
- Permission to add an HTML verification file/tag, or
- Access to an existing verified Google Search Console property

Why it matters: Search Console is needed to monitor indexing, sitemap errors, Core Web Vitals, search queries, and coverage drops.

Summary table

Priority	Input	Effort after input
P0	First services to sell	Medium
P0	Primary conversion goal	Small
P0	Phone/WhatsApp decision	Small
P1	Service area	Small
P1	Deliverables and turnaround	Medium
P1	Pricing guidance	Small
P1	Testimonials/reviews	Medium
P1	Client logo permissions	Small
P1	Google Business Profile status	Medium
P1	Social profile URLs	Small
P1	Video upload dates	Small
P1	Default OG image	Small
P2	Project rewrite notes	Large
P2	Flagship case-study notes	Large
P2	Social examples for internal pages	Medium
P2	Female creator positioning	Small
P3	Imprint/business details	Small
P3	Search Console access	Small
