

SEO Assessment & Improvement Plan

Updated: 2026-04-29

Site: jineechen.com — static Next.js export

Goal: improve organic and paid-search readiness for a photographer, videographer, video producer, documentary producer, and social media content creator in Singapore.

This is the current source of truth for SEO work. It consolidates the earlier [SEO.md](#), [SEO-CUSTOMER-INPUT.md](#), and the 2026-04-29 adversarial assessment.

Executive summary

The website has a strong visual portfolio and a solid technical base: static export, sitemap, robots.txt, metadata, WebP images, self-hosted fonts, portfolio manifests, and some structured data. The main gap is commercial search positioning. The site currently reads more like a polished portfolio than a local service website designed to rank and convert for crowded Singapore searches.

Competitors for Singapore photography and videography queries commonly use dedicated landing pages with exact service intent, client logos, testimonials, pricing or package cues, turnaround times, FAQs, Google reviews, and strong calls to action. This site has the proof to compete, especially in documentary, broadcast, event, and social content work, but that proof needs to be packaged into service pages and richer case studies before Google Ads spend.

Highest-priority work:

1. Fix sitemap accuracy so only generated, indexable URLs are submitted.
 2. Create dedicated Singapore service landing pages instead of relying only on portfolio categories.
 3. Rewrite thin, duplicate, and placeholder project descriptions.
 4. Strengthen local SEO signals with [ProfessionalService](#) schema, Google Business Profile, reviews, and service details.
 5. Prepare Google Ads landing pages with conversion tracking, clear deliverables, trust proof, and mobile performance checks.
-

Adversarial review summary

SEO expert lens

- The technical foundation is usable, but sitemap quality and route consistency need cleanup.
- The site does not yet target enough high-intent Singapore service keywords through dedicated pages.
- Portfolio content has valuable proof but many metadata descriptions are too thin or duplicated.
- Local entity signals are incomplete: service area, business profile, reviews, and service schema need reinforcement.
- Google Ads should wait until service-specific landing pages and conversion tracking exist.

Corporate event customer lens

This visitor wants quick answers about event photography, event videography, conference coverage, launch events, turnaround time, deliverables, sample galleries, pricing range, and trust proof. Current portfolio examples help, but the site does not yet make the offer explicit enough.

Brand / social media customer lens

This visitor wants to know whether Jinee can create reels, short-form brand content, founder content, launch videos, captions, thumbnails, and platform-ready edits. Examples exist, but social media content is not yet framed as a service offer on the website.

Documentary / broadcast customer lens

This visitor wants a local producer, field producer, videographer, fixer, researcher, or director in Singapore/Taiwan. The portfolio supports this strongly, but the site needs a dedicated landing page for this differentiated niche.

Current strengths

Strength	Evidence	SEO value
Singapore positioning exists	<code>src/lib/constants.ts</code> , homepage metadata	Useful base relevance for local searches
Static export is crawlable	<code>next.config.ts</code> , <code>src/app/sitemap.ts</code> , <code>public/robots.txt</code>	Search engines can discover pages
Portfolio data is structured	<code>src/content/portfolio/*.json</code>	Easier to scale metadata and schema
Structured data foundation exists	<code>Person</code> , <code>VideoObject</code> , <code>ImageGallery</code> JSON-LD	Good base for entity and rich-result eligibility
Strong proof assets	CNA, 8World, Mediacorp, SCDF, Uniqlo-style examples	Differentiates from generic freelancers
Visual performance base is good	WebP assets, self-hosted fonts	Helpful for image-heavy UX
Conversion paths exist	Email, Calendly, contact form, Instagram	Basic lead capture is already present

Current critical findings

1. Sitemap includes URLs that are hidden or do not exist

Priority: P0

Effort: Small

Needs human input: No

Observed issues:

- `src/app/portfolio/social-media/[slug]/page.tsx` does not exist, but the sitemap lists social media project detail URLs.
- Hidden projects are still included in the sitemap, including `behind-the-scenes`, `marigold-ad`, `ministry-of-manpower`, and `nescafe-ad`.
- All sitemap entries use `new Date()` as `lastModified`, so every build makes every page look newly changed.

Recommended fixes:

- Filter project routes with `visible !== false`.
- Remove social media detail URLs from the sitemap unless real pages are added.
- Add sitemap tests that verify every sitemap URL has a generated route.
- Add `updatedAt` or `publishedAt` fields later for more accurate `lastModified` values.

2. Dedicated service landing pages are missing

Priority: P0

Effort: Medium to Large

Needs human input: Partly

Current routes are portfolio-led rather than buyer-intent-led. The site needs pages built around the queries people search before hiring someone.

Recommended pages:

Service page	Primary intent	Suggested URL
Event Photographer Singapore	Corporate/private event photography	/services/event-photographer-singapore/
Event Videographer Singapore	Event films, highlight reels, interviews	/services/event-videographer-singapore/
Photographer & Videographer Singapore	Combined coverage/package intent	/services/photographer-videographer-singapore/
Video Producer Singapore	Planning, producing, filming, brand content	/services/video-producer-singapore/
Documentary Producer Singapore	Broadcast, field producer, fixer, documentary support	/services/documentary-producer-singapore/
Social Media Content Creator Singapore	Reels, short-form video, editorial social content	/services/social-media-content-creator-singapore/

Each page should include:

- One clear **h1** matching the service/search intent.
- Short positioning copy with Singapore service area.
- Deliverables and use cases.
- Relevant portfolio examples.
- Trust proof: clients, publications, testimonials, reviews.
- Process and turnaround.
- FAQ section.
- Direct CTA to contact, Calendly, email, and optionally WhatsApp/phone.

3. Project descriptions are thin, duplicated, or placeholders

Priority: P1

Effort: Medium

Needs human input: Partly

Repository audit found:

- 58 project descriptions under 120 characters.
- 46 project descriptions under 80 characters.
- [guardians-vietnam](#) has a one-character description: ..
- 14 social media projects use the duplicate description [Instagram editorial reel content..](#)
- 3 video projects use the duplicate phrase [Indian cusine vegetarian cusine and Ayurveda..](#)
- Most video entries use [2023-01-01T00:00:00+08:00](#), which looks like a placeholder upload date.

Recommended rewrite pattern:

[Service type] in [location] for [client/project type], covering [deliverables] with [style/outcome]. Jinee served as [role].

Example direction:

- Weak: CNA Insider series "Our Blind Kitchen".
- Stronger: Documentary video production in Singapore for CNA Insider, following visually impaired chefs opening a café. Jinee worked across research, producing, directing, and videography.

4. Local SEO signals are incomplete

Priority: P1

Effort: Small to Medium

Needs human input: Partly

Recommended technical work:

- Add **ProfessionalService** JSON-LD with **name**, **url**, **email**, **areaServed**, **serviceType**, **sameAs**, and Singapore service area.
- Add richer **Person** schema on **/about/** with **jobTitle**, **knowsAbout**, and **hasOccupation**.
- Add **BreadcrumbList** schema on service, category, and project pages.
- Add canonical metadata for core pages.

Recommended business work:

- Create or optimize Google Business Profile.
- Request Google reviews from prior clients.
- Keep service categories, service area, name, contact details, and website content consistent.
- Add photos/videos to Google Business Profile.

5. Google Ads readiness is incomplete

Priority: P1

Effort: Medium

Needs human input: Partly

Before running ads:

- Build one landing page per ad group/search intent.
- Add conversion tracking for contact form submissions, Calendly clicks, email clicks, phone/WhatsApp clicks, and Instagram clicks.
- Add explicit deliverables, process, response expectations, turnaround, usage rights, and price guidance where possible.
- Add testimonials, reviews, or case studies.
- Confirm negative keywords before broad matching.
- Test mobile landing pages and page speed after deployment.

Suggested first ad groups:

Ad group	Landing page	Example keyword direction
Event photography	/services/event-photographer-singapore/	event photographer singapore, corporate event photographer singapore
Event videography	/services/event-videographer-singapore/	event videographer singapore, corporate event videography singapore

Ad group	Landing page	Example keyword direction
Documentary / broadcast	/services/documentary-producer-singapore/	documentary producer singapore, field producer singapore
Social media content	/services/social-media-content-creator-singapore/	social media videographer singapore, reels creator singapore

Avoid starting with broad [photographer singapore](#) unless budget is high and conversion tracking is reliable.

Additional findings

Heading structure

Priority: P1

Effort: Small

Needs human input: No

Observed issues:

- [/about/](#) renders an [h2](#) but no visible [h1](#).
- [/contact/](#) lacks a clear visible [h1](#).
- [/portfolio/](#) uses section [h2](#)s but no page-level [h1](#).
- [/portfolio/social-media/](#) renders multiple [h1](#) elements through mapped sections.
- Homepage uses a screen-reader-only [h1](#); acceptable technically, but less persuasive for humans.

Recommended fixes:

- Add one visible [h1](#) per core route.
- Use [h2](#) for sections.
- Make the homepage headline communicate commercial positioning, e.g. [Singapore Photographer, Videographer & Video Producer](#).

Category metadata

Priority: P1

Effort: Small

Needs human input: No

Current titles such as [Photography](#), [Videography](#), and [Social Media](#) are too generic.

Suggested direction:

- [Photography Portfolio – Event & Travel Photographer in Singapore](#)
- [Videography Portfolio – Documentary & Corporate Videographer in Singapore](#)
- [Social Media Content Portfolio – Reels & Editorial Video in Singapore](#)

Portfolio buying confidence

Priority: P2

Effort: Medium

Needs human input: Partly

Project pages should answer:

- What was the client goal?
- What did Jinee deliver?

- What role did Jinee play?
- What was the production scale?
- What kind of client should hire her for similar work?
- What should the visitor do next?

Recommended repeatable project fields:

- Client / project type
- Role
- Services delivered
- Location
- Outcome or use case
- Relevant CTA

Social media project SEO leakage

Priority: P2

Effort: Medium

Needs human input: Partly

Many social media tiles link directly to Instagram. That is useful for watching reels, but it sends SEO and conversion context away from the website.

Recommended fixes:

- Create internal case-study pages for important social media examples.
- Embed or link to Instagram from the internal page.
- Add context: platform, hook, goal, format, role, and outcome.

Image SEO and performance

Priority: P2

Effort: Medium

Needs human input: Partly

Recommended fixes:

- Keep eager/priority loading only for the first hero slide.
- Add **sizes** to hero slideshow images.
- Improve alt text for key portfolio images where the subject and context are known.
- Add **ImageObject** structured data for selected photography projects.
- Add relevant surrounding text near image galleries.

Open Graph and social previews

Priority: P2

Effort: Small to Medium

Needs human input: Yes for final image choice

Recommended fixes:

- Add a default 1200×630 OG image for the site.
- Keep project-level OG images, but consider dedicated 1200×630 assets for the strongest projects.
- Add page-specific OG title/description for service pages and portfolio categories.

Actions that can be done without human feedback

Priority	Action	Effort	Likely files	Why it matters
P0	Clean sitemap to include only generated/indexable URLs	Small	<code>src/app/sitemap.ts</code> , tests	Removes crawl errors and sitemap noise
P0	Remove social media detail URLs unless pages exist	Small	<code>src/app/sitemap.ts</code>	Avoids submitting non-existent URLs
P0	Exclude <code>visible: false</code> projects from sitemap	Small	<code>src/app/sitemap.ts</code>	Avoids hidden projects being crawled from sitemap
P1	Add one visible <code>h1</code> per core page	Small	<code>src/app/**</code> , section components	Improves clarity and accessibility
P1	Improve category metadata with Singapore terms	Small	portfolio category pages	Better local relevance
P1	Add basic <code>ProfessionalService</code> schema without phone	Small	<code>src/app/layout.tsx</code> or schema helper	Reinforces local service entity
P1	Add canonical metadata for core routes	Small	metadata exports	Reduces URL ambiguity
P1	Add <code>BreadcrumbList</code> JSON-LD	Medium	portfolio/service pages	Better hierarchy and rich-result eligibility
P2	Fix hero slideshow eager loading	Small	<code>src/components/sections/HeroSlideshow.tsx</code>	Improves page-speed readiness
P2	Scaffold service page templates	Medium	<code>src/app/services/**</code>	Creates SEO/ad landing page structure
P2	Add internal service ↔ portfolio links	Medium	service/portfolio components	Builds topical

Priority	Action	Effort	Likely files	Why it matters
				clusters
P2	Add sitemap-route consistency tests	Medium	Jest tests	Prevents future SEO regressions
P3	Refresh related docs after implementation	Small	<code>docs/**</code>	Keeps the plan accurate

Actions requiring Jinee/business input

The detailed checklist lives in `docs/SEO-CUSTOMER-INPUT.md`.

Priority	Needed input	Effort after input	Why it matters
P0	Which services to sell first	Medium	Determines landing page and ad strategy
P0	Primary conversion goal	Small	Required for Google Ads tracking
P0	Public phone/WhatsApp decision	Small	Improves local conversions
P1	Service deliverables and turnaround	Medium	Buyers compare reliability, not visuals only
P1	Pricing range or starting prices	Small	Improves ad lead quality
P1	Testimonials/reviews and permission	Medium	Critical trust signal
P1	Client logo permissions	Small	Makes proof more persuasive
P1	Google Business Profile status	Medium	Critical for local search
P1	Real/approximate video upload dates	Small	Improves <code>VideoObject</code> structured data
P2	Case-study notes for strongest projects	Large	Converts portfolio into long-tail SEO assets
P2	Default OG image choice	Small	Improves social previews
P2	Female photographer/videographer keyword angle	Small	Potential niche positioning if intentional
P3	Taiwan as secondary service area	Small	Affects local SEO and schema focus

Effort clusters

Extra-small fixes: under 30 minutes each

- Confirm current `sameAs` social URLs.
- Add or omit Twitter/X metadata based on whether an active handle exists.
- Adjust category metadata titles/descriptions.
- Add missing visible page headings.
- Remove hidden projects from sitemap.

- Add basic canonical URLs for core pages.

Small fixes: 30 minutes to 2 hours

- Clean sitemap and update tests.
- Add basic **ProfessionalService** schema.
- Fix hero slideshow eager loading.
- Add reusable breadcrumb schema helper.
- Add simple homepage service intro copy using existing facts only.

Medium fixes: half day to 1 day

- Create service landing page templates.
- Add visible breadcrumbs across portfolio pages.
- Rewrite top-priority metadata and introductory copy.
- Add selected **ImageObject** structured data.
- Add conversion tracking hooks.
- Add internal linking between service pages and portfolio projects.

Large fixes: 1 to 3 days

- Write full service pages with proof, deliverables, FAQs, and CTAs.
- Rewrite all thin portfolio descriptions.
- Create internal social media case-study pages.
- Add case-study sections for best commercial examples.
- Prepare Google Ads landing pages and ad group mapping.

Ongoing work

- Collect reviews.
- Publish fresh portfolio/case-study updates.
- Monitor Google Search Console.
- Monitor Google Ads Quality Score, search terms, landing page experience, and conversion rates.
- Add new long-tail pages based on real impressions and leads.

Recommended 30-day roadmap

Week 1 — Technical cleanup before ads

1. Fix sitemap accuracy.
2. Clean heading structure.
3. Add canonical URLs.
4. Add breadcrumb schema.
5. Add basic local service schema.
6. Fix hero image loading.
7. Verify in Google Search Console after deployment.

Week 2 — Service intent pages

1. Create **/services/** hub.
2. Create event photographer and event videographer pages first.
3. Create video producer / documentary producer page as the differentiator.
4. Link pages to best existing portfolio work.
5. Add CTAs to contact, Calendly, email, and optionally WhatsApp/phone.

Week 3 — Content and trust

1. Rewrite the top 10 most important project descriptions.
2. Add 3 to 5 case studies.
3. Add testimonials or client proof if permitted.
4. Add FAQ blocks for pricing, turnaround, deliverables, booking, and usage rights.

Week 4 — Ads readiness

1. Add conversion tracking.
2. Create one landing page per ad group.
3. Start with exact/phrase match service keywords.
4. Add negative keywords such as jobs, salary, course, free, internship, school, DIY, template, camera, and unrelated wedding terms if weddings are not targeted.
5. Monitor search terms and landing page experience before scaling budget.

Suggested keyword strategy

Avoid relying only on broad terms like **photographer singapore**. They are crowded, expensive, and ambiguous. Build around more specific buyer intent.

Intent cluster	Example target phrases	Recommended page
Event photography	event photographer singapore, corporate event photographer singapore, conference photographer singapore	Event Photographer Singapore
Event videography	event videographer singapore, corporate event videography singapore, event highlight video singapore	Event Videographer Singapore
Combined package	photographer and videographer singapore, event photography and videography singapore	Photographer & Videographer Singapore
Documentary / broadcast	documentary producer singapore, field producer singapore, local fixer singapore, documentary videographer singapore	Documentary Producer Singapore
Brand content	brand videographer singapore, corporate video producer singapore, social media video production singapore	Video Producer / Social Media Content
Social reels	reels creator singapore, social media videographer singapore, short-form video singapore	Social Media Content Creator Singapore

Older SEO items now considered complete or superseded

Former item	Status
About/contact title duplication	Complete: page titles now use short segment titles
Homepage metadata export	Complete
Manifest short_name	Complete
Privacy/imprint noindex	Complete
Placeholder sameAs URLs	Partly complete; still needs profile confirmation
Default OG image	Still needs image choice
Breadcrumb structured data	Still open

Former item	Status
ImageGallery/ImageObject improvements	Still open
Real video upload dates	Still needs input
LocalBusiness/ProfessionalService schema	Still open
Rich About page Person schema	Still open
Real sitemap <code>lastModified</code> values	Still open after sitemap cleanup
Search Console setup	Still needs deployed-site access
Keyword-targeted project descriptions	Still open
